

### **ABSTRACT OF THE DISCLOSURE**

A positioning device includes a knob having a receiving tube and a positioning tube extending from a side thereof. The positioning tube is enclosed by the receiving tube and has a first engaging portion in an inner periphery thereof. A  
5 connection member is connected to the receiving tube and a rod with a spring mounted thereto is inserted in a passage defined in the connection member. The spring is biased between the connection member and a stepped shoulder of the rod. The first end of the rod is movably inserted in the positioning tube and has a second engaging portion which is engaged with the first engaging portion. A second end of  
10 the rod extends from a distal end of the connection member. The second end of the rod is retracted in the passage by pulling the knob.
